

Use-after-free coverage sets

18 retained heap-relevant UAF cases · 17 executable + 1 audit-only · RSH-006 stack-only correction excluded

Uncovered executable UAF controls: RSH-003 and RSH-019 are same-object/pre-reuse races; RSH-075 uses SQLite's C allocator.

RSH-006 is excluded because the dangling target is stack storage, outside the heap allocator scope.
